

## ABSTRACT

A disposable pants-type diaper for playing in the water is designed to prevent a wearer's excretory substance, super absorbent polymer (SAP), pulp or the like included in an absorber composing an absorbable main body from flowing out of openings or the like of the pants, a wearer of the diaper can move freely, and the diaper does not slip down in the water. The absorbable main body is formed at least by a liquid permeable top sheet, a liquid impermeable sheet and the absorber intervening between the sheets, and three-dimensional gathers which stand upright on the side of the top sheet of the absorbable main body form an excretory substance housing pocket. Further, an elastic stretch member is disposed on a waistband portion of the absorbable main body and side portions between the waistband portion and leg portions.
